rate data on the entire physician population in the United States. *Characteristics of Physicians* is related to two other AMA-CHSRD publications: *Physician Distribution and Medical Licensure in the United States*, and *Medical School Alumni*. This publication differs from these in that more characteristics are detailed for smaller geopolitical units of analysis. Comprehensiveness and detail do, however, have their cost. A total of fifty-one volumes, one for each of the States and the District of Columbia, are required in order to present these data.

Successful completion of this project has required cooperation between the AMA and the Bureau of Health Manpower of the Department of Health, Education, and Welfare (DHEW). The *AMA Physician Masterfile* is the data source and considerable resources have been utilized by the AMA in developing the computer programs and designing the volumes. Contract HRA-232-78-0163 with the Health Resources Administration of DHEW has provided the financial support needed to print and disseminate these volumes. In addition to the bound volumes, print tapes of the information contained in this report are available from the Bureau of Health Manpower. Howard V. Stambler, Director of the Division of Manpower Analysis of the Bureau of Health Manpower is the Contract Project Officer. Views or conclusions contained in this study should not be interpreted as representing the official opinion or policy of the Department of Health, Education, and Welfare.

Characteristics of Physicians was conceived by AMA-CHSRD partially in response to passage of the National Health Planning and Resources Development Act of 1974 (PL #93-641). With passage of this legislation it became apparent that planning and regulation were to become integral components of the health care system in the United States.

The distribution of physicians also has been the object of Federal legislative action for several decades. Since 1965, four separate pieces of legislation each attempting to effect a different distribution of health manpower resources have been enacted by the federal government. The most recent of these is the Health Pro-

legislation is the designation of criteria for designating shortage areas designated as such? These issues and more resolved.

The *Characteristics of Physicians* meet some of the data requirements of market approaches to resource allocation. Assessment of specific distributions, determination of needs and planning to ensure that needs are met require detailed data on relevant physician population. Data are available with the express purpose coupled with intelligent analysis and evaluation.

Use of these data, however, is for policy makers. In addition, to utilize *Characteristics of Physicians* and migration decisions, and to consult *Characteristics of Physicians* types of continuing medical education to be of interest to a large number in the region. Researchers in health sciences have also repeatedly used this type of data provided. The *Physicians* is being widely used to meet the repeatedly expressed needs of groups.

The efficacy of the market distributive mechanism for health care is gaining supporters. It will be before the desired incentive structure in the health care market. The CHSRD is attempting to develop a relating to health personnel and resources available and, thus, introducing a new possibility.

Lynn E.
Project Director,
Director,
Services

Development, and Project Director, for his efforts in making the project possible and in assuring the availability of resources necessary to its successful completion. Gene Roback of the AMA Survey Data Center gave helpful advice and comments during conceptualization and throughout the term of this project. Gary Schneier and Raymond Healy, from the AMA Division of Computer and Information Services, provided the programming expertise needed to complete

tasks.

Finally, the authors also thank Stambler, Director, Division of Health Manpower, Bureau of Health Manpower, Education, and Welfare, and the staff for their efforts to make publication of the final report in as many volumes possible. Special thanks to Special Agent Kramer, Contract Liaison, for his assistance in publication and dissemination.

(Chicago: American Medical Association, 1977), p. 32.

independent cities, largely those in Virginia, are incorporated into the county which encompasses it. For instance, Princess Anne County in Virginia is referred to as Virginia Beach city. In addition, Kalawao County in Hawaii is combined with Maui County and Alaska is divided into four judicial divisions with assignment into appropriate county group based on the population of the judicial division.

consist of an aggregation however, (Alaska; County of Chicago; and the N San Carlos, and Papago service areas were not co politico-legal boundaries for each HSA are listed

Health Service Area

The National Health Planning and Resources Development Act of 1974 mandated the division of the U.S. into health service areas. One section of this publication, Tables 16-18, presents data on Non-Federal physicians in health service areas located entirely or partially within the state covered in this volume. States with more than one health service area within their boundaries have tables for each health service area. In states where the entire state is designated a health service area, there is, of course, only one health service area table.

The existing *Masterfile* data were converted into the health service area classifications based upon the listing of health service areas published in the September 2, 1975. *Federal Register* and incorporate revisions by the

Physician Characteristics

Distributions of physicians are described in this section in terms of a number of professional characteristics with some individual characteristics cross-listed with others. Key characteristics include specialty, major professional activity, age, sex, board certification, Federal or Non-Federal employment, and county of graduation. The thirty-six specialty distributions used in this publication are the same as used in other AMA publications such as the *Physician Distribution and Medical Licensure in the U.S.*, and are presented in Table B. A physician's specialty classification is defined as that in which he/she is spending the largest number of practice hours. The county of county tables utilize the classification of primary care/non-primary care specialists. The county of county tables, for the purposes of these tables, are physicians whose specialty is general practice, internal medicine, pediatrics, and

of the specific training requirements of a specialty board.² The licensed physician may practice any specialty regardless of whether the physician is board certified or not. Table B indicates board certification in some specialties, but not necessarily the specialty in which the physician is classified. However, over 90 percent of physicians reported as board certified are certified in the specialty in which he/she is classified.³

Physicians' professional activity is reported by county to assess the availability of patient care. Professional activity is reported by county for subgroups of patient care on the basis of

² "The boards are in no sense educational institutions. A certificate of a board is not to be considered a certification of any person legal qualifications, privilege to practice medicine or a specialty. The boards do not restrict or limit the professional activities of a physician who do they desire to interfere in the regulation of the practitioner of medicine." Liaison C-

from whom the AMA has not received any information as to their type of practice and present employment.

Definitions of the two other classifications used in describing physician characteristics are: Age as defined in terms of intervals of under 35, 35 to 44, 45 to 54, 55 to 64, 65 to 75, and 75 and over; Federal employment as defined as employment by the Veterans Administration, Military Services, the U.S. Public Health Service, and other Federal Service.

The medical education background of physicians is presented in several forms. Physicians who graduated from United States medical schools are categorized by the school of graduation and the state in which they currently are practicing medicine. In addition, physicians located in a particular county group or county within a state are cross-categorized either as having graduated from a medical school in the state, in a contiguous state, in some other state, in Canada, or outside the United States and Canada.

RELATIONSHIP TO OTHER AMERICAN MEDICAL ASSOCIATION PUBLICATIONS AND TO THE COOPERATIVE HEALTH STATISTICS SYSTEM (CHSS)

Although previous AMA publications, *Physician Distribution and Medical Licensure in the U.S.*, and *Medical School Alumni*, have reported similar information, *Characteristics of Physicians* provides more detailed information than previously available in published form.

The publication has two key features: greater detail of physicians' characteristics and greater detail with respect to geographic units. More detail is provided for age distributions, sex, and specialty board certification—for states, county groups, individual counties, and for the health service areas. Thus, this publication attempts to meet a more extensive set of data needs not met by other AMA publication series.

A data collection effort to provide information similar to the data published in *Characteristics of Physicians* is being undertaken by the Cooperative Health Statistics System (CHSS). Although this system even-

INTERPRETATION

Because of the complexity presented in these volumes, their interpretation. A few necessary about the treatment of classifications used in these

As mentioned previously, it is occasionally active physicians who research and planning purposes; however, it was felt that the manpower should be represented. The dual purpose caused some problems in certain tables because of the inclusion of inactive categories. These two tables are treated differently in the tabulations but are treated the same in the type of cross-tabulation. In tables in which specialty is a professional activity, the inactive physicians are included in the total distributed by specialty. Inactive is provided at the bottom of the "Inactive," "Non-classified," "Unknown". To arrive at the total and not classified values shown in the other major professional activity applies to Tables 1, 3, 6, 9,

Address Unknown

Physicians with unknown addresses are included in Table 1 for informational purposes but are not distributed throughout the grand total. Physicians with unknown addresses are excluded from all other national grand total value on Table 1. Table 2 plus the total in Table 4.

Availability of Data

This concludes the description of the COP series. Every effort has been made to make the most frequently requested data meaningful to most users. The data made available in the form of the Bureau of Health Manpower Statistics is underway to publish the CO-

physicians has been maintained by the Association since 1906. However, in the early days of its existence, the *Masterfile* was primarily a listing of physicians maintained as a record-keeping device for membership and mailing purposes. Decisions were made on a day-to-day basis without a unified approach and without regard as to what these decisions would mean in terms of statistical methods and interpretation of the data.

As research activities within the Association became more sophisticated, the complexity of data requirements increased. The *Masterfile* was, therefore, expanded and proved to meet these requirements. Today, the *AMA Physician Masterfile* is the most comprehensive and complete source of physician data in the United States. It includes information on every physician in the country, members and non-members of the Association, on graduates of American medical schools who are temporarily practicing overseas, and graduates of foreign medical schools who are in the United States and meet U.S. education standards for primary recognition as physicians. Thus, all physicians comprising the total physician manpower pool are included on the *AMA Physician Masterfile*.⁸

A file is started on each individual upon entry into medical school or, in the case of foreign and Canadian graduates, upon entry into the U.S. As a physician's training and career develops, additional information is added to the file—e.g., internship and residency training, licensure board certification, professional affiliations, and other characteristics. Although such characteristics change over time, they are not subject to constant change. These types of characteristics are included in the "historical" portion of the *Masterfile*. In addition, there is the "current professional activities" portion of each physician's record that identifies his current address, professional activity, specialties, and employment status. By definition, this current portion of the *Masterfile* is subject to constant change and must be updated through intense monitoring techniques.

Prior to 1966, physician classification by specialty, activity, and employment was made through the Classification of Professional Activities (CPA) system, which was based upon a "private practice/not in private practice" concept. Data were collected under this system via a short postcard-type questionnaire en-

age, sex, and specialty. However, the AMA inquiry without specifying as to director queries relating to the number of hours worked in each activity, manpower cannot be properly allocated to different activities.

This recommendation gained momentum in 1966 when the then AMA Center for Health Services Research, which has been replaced by the Center for Statistical Analysis and Information, began its efforts to update the *AMA Physician Masterfile*. In the process, it identified four major deficiencies in the classification system:

1. Existence of categories that were exclusive, resulting in duplication between and within employer categories.
2. Lack of a criterion upon which to base classification.
3. Lack of information on the basis of each individual record.
4. Unavailability of information for the annual verification process.

These deficiencies were of sufficient magnitude to require major revisions in both the structure and data collection procedures. To address this subject (the Reclassification of Physicians), the AMA Center initiated to redesign the classification system. It undertook the Reclassification project in cooperation with the National Center for Health Statistics, United States Public Health Service, and the Demographic Surveys of the U.S. This project and knowledgeable researchers.

The first step in reclassification was the revision of the 1966 edition of the *Physicians, Hospitals, and Health Services* of the AMA Center for Health Services Research. Through a series of revisions, the old *Masterfile* categories, such as "private practice" was converted to "patient care/other professional activities." The 1966 format changes constituted a major change in direction, an important deficiency in the *Masterfile* of the physician population.

⁸This section draws heavily from: Goodman, L.J. *Physician Distribution and Medical Licensure in the U.S.*, 1976. Chicago: American Medical Association, 1977.

After five mailings a usable response of 87.4 percent was attained.

The questionnaires were passed through a computer editing procedure and a quality control check. They were then keypunched and the data processed through a series of computer programs which produce a physician's activity, specialty, and employment classification and a physician record.

The 1973 census was scheduled to be conducted in 1973. However, in order to verify the information collected in 1968 under the new system, a comparison of 325,000 physicians was made again in 1973. The questionnaire, structurally the same as that of 1968, included the physician's 1968 response with a column for corrections or changes. A usable response of 86.8 percent was attained. Analysis of the 1973 data revealed that the data collected in 1968 was consistent with that of 1973, therefore, confirming the questionnaire used to gather the data as a valid survey instrument. The most recent comparison for the purpose of this project, was conducted in 1973. The 1973 questionnaire is identical to the 1968 questionnaire except for the addition of a section for corrections and other general information. The response rate was consistent at 86.8 percent. A comparison of the questionnaire used in the 1973 census is shown in Exhibit B.

Each year, a comprehensive computerized updating system keeps the *Masterfile* current. The physician's record is dated to reflect the most recent information which may be obtained for AMA mailings. The information includes company mailings, physician corrections, hospitals, government agencies, medical societies, medical agencies, medical societies, specialty licensing agencies. Any indication of a change in professional status or address triggers a question to be added to the one used in the 1973 census. The question is placed on a "change" file while follow-up is made to raise the response rate. In 1975, 13,500 weekly change questionnaires were mailed.

A comparison check on the *Masterfile* between the AMA's Center for Health Services Development and the Department of Health and Human Services is conducted year-end computer comparison of 1972 and 1973 year-end data to determine consistency as the complete census data is received in 1973. A similar comparison was conducted in 1969. A similar comparison was conducted in 1977. The reliability of

- *Medical Schools*—Provides data on year of graduation, birthplace, and professional appointments.
- *State Licensing Boards*—Provides data on specialty of physicians.
- *Hospitals*—Provides information on residents, birthplace, and for graduates in training.
- *Department of Defense*—Provides data on physicians in government service.
- *American Specialty Boards*—Provides data on board certification of physicians.
- *Medical Societies*—Provides data on specialty, state, and county societies.
- *Educational Council for Foreign Medical Graduates*—Provides data on foreign medical graduates.

While many sources provide data for the *Masterfile*, data are also often extracted from the *Masterfile* for use by these agencies. The *Masterfile* is used by the National Center for Health Statistics; the Office of Emergency Preparedness; the Office of the President of the U.S.; the Secretary of DHEW; the National Institute of Health; various other federal, state, and local agencies; numerous universities and medical schools; county, and specialty medical societies; pharmaceutical industry; and ten addressing

EXHIBIT A:

HEALTH SERVICE AREA DESIGNATION JULY 1, 1976

The National Health Planning and Resources Development Act of 1974 (PL #93-641) requires that health service areas be established in every State of the United States. The legislation specified that each health service area must meet the following requirements:

1. The area must be a rational geographic area containing a comprehensive range of health services, and of a character suitable for the planning and development of health services.

¹Committee on Interstate and Foreign Commerce, *Health Planning and Resources Development Act of 1974*, Report No. 93-1282, (Washington, D.C., 1974).

metropolitan statistical area (as determined by the Office of Management and Budget) with a population of more than three million persons; and the population of an area may be less than 500,000 in unusual circumstances, but not less than 200,000 except in highly unusual circumstances if the Governor of each state in which the area is located determines, with the approval of the Secretary, that the area meets the other requirements of this subsection. "Unusual" and "highly unusual" circumstances are to be defined by the Secretary in regulations.

4. To the maximum extent feasible, the boundaries of the health service area must be coordinated with the boundaries of Professional Standards Review Organizations, existing regional planning areas, and State planning and administrative areas.

Each standard metropolitan statistical area (SMSA) must be entirely contained within the boundaries of one health service area unless the Governor of each State in which a SMSA is located determines, with the approval of the Secretary, that a health service area should contain only part of the SMSA in order to meet the other requirements of this subsection.

The 205 Health Service Areas designated in July 1976 * are the definitions used in this publication. A listing of the HSA's and the counties, towns, or cities comprising them for the state treated in this volume follows below.

DIRECTORY OF PHYSICIANS

Center for Health Services Research and Development

AMERICAN MEDICAL ASSOCIATION

535 N. Dearborn Street

Chicago, Illinois 60610

Dear Doctor:

Please complete this questionnaire as soon as possible so that your official record is up-to-date with correct and current information for printing of the *1973 AMA DIRECTORY*. Data obtained from this questionnaire will be aggregated and used to describe the distribution of physicians and to analyze health manpower. However, *NO information from your record will be released* to any organization for the purpose of developing independent physician data files.

Thank you.

Instructions

1. Please answer every question on the basis of your current activities.
2. **Indicate any changes.** Information which you provided previously has been printed in this form. Please complete unanswered sections and make discrete changes where applicable.
3. Upon completion, return the questionnaire at your earliest possible convenience, using the preaddressed envelope.

Contents

The questionnaire is divided into four sections:

1. Professional Activities—the types of activities in which each physician spends the most time during an average week.

2. How many hours per week do you spend in PRACTICE INVOLVING DIRECT CARE OF PATIENTS? Direct care means seeing patients; however, it also includes patient services by such physicians as pathologists and radiologists.

Exclude time spent in training, teaching, or research. Include travel time and time spent on record keeping and other office work connected with your patients.

3. How many hours per week do you spend on ADMINISTRATIVE ACTIVITIES, A SALARIED STAFF MEMBER OR EXECUTIVE OF AN ORGANIZATION?

Exclude time spent on record keeping and office work connected with management of your practice. Include activities connected with the administration or staff committees of a hospital, other health facility or agency, clinic or group, or any other organization by which you may be salaried as an executive or staff member.

4. How many hours per week do you spend on MEDICAL TEACHING?

Include hours spent in teaching as well as in preparation for subjects taught in medical schools, nursing schools, other hospital schools, hospitals, colleges, universities, or any other educational institutions.

- a. OF THESE HOURS how many do you spend on direct care of patients?

Exclude time devoted to patient care by house staff under your supervision.
In view of possible overlap of hours spent in teaching and research, please do not double count such hours, but report them instead in the most applicable category.

5. How many hours per week do you spend on MEDICAL RESEARCH?

All phases of investigating medical problems regardless of source of funds for such research.

- a. OF THESE HOURS how many do you spend on direct care of patients?

Exclude time devoted to patient care by house staff under your supervision.

6. How many hours per week do you spend on any OTHER medical activities (not listed above) INVOLVING DIRECT CARE of patients?

7. How many hours per week do you spend on any OTHER medical activities (not listed above) NOT INVOLVING direct care of patients?

8. About how many hours per week do you spend in ALL PROFESSIONAL ACTIVITIES? Total of questions 1 through 7 (exclude 4a and 5a)

If you indicated "zero" on question 8, or if none of the above categories apply to you, please answer question 9.

9. Are you: ☐ RETIRED ☐ SEMI-RETIRED

☐ PERMANENTLY DISABLED

☐ TEMPORARILY not in practice

☐ Not active for other reasons (please describe) _____

Total of
equivalent
Section I
